PROFESSIONAL SUMMARY

Results-driven Mobile Application Developer with 4+ years of experience building and shipping scalable, high-performance Android applications used by 500K+ enterprise users. Expert in Java and Kotlin (Android SDK), with practical experience integrating Firebase services (FCM, Crashlytics, Analytics), consuming RESTful APIs, and managing source code using Git and GitHub. Committed to mobile security best practices — including OWASP Top 10 compliance, certificate pinning, encrypted offline storage, and secure background services. Familiar with the iOS ecosystem through cross-team collaboration and Xcode tooling; eager to expand cross-platform capability with Flutter/Dart. Proven record of improving app performance by 30%, boosting user engagement by 90%, and cutting manual QA effort by 80% through CI/CD automation.

CORE COMPETENCIES & TECHNICAL SKILLS

Android SDK (Primary): Java • Kotlin • Android Studio • MVVM • Jetpack Compose • Jetpack Components (ViewModel, LiveData, Room, WorkManager, Navigation) • Coroutines • Flow • Retrofit

Cross-Platform & iOS Awareness: Flutter / Dart (familiar) • Xcode (iOS toolchain awareness) • REST API integration across platforms

Firebase Ecosystem: Firebase Cloud Messaging (FCM) • Crashlytics • Firebase Analytics • Firebase Realtime Database

APIs & Databases: RESTful API Integration • MySQL (backend-layer integration) • Room (local SQLite) • Offline Storage

Mobile Security: OWASP Top 10 • Certificate Pinning • AES Encryption • Secure Authentication • SAST (SonarQube) • DAST (OWASP ZAP / Burp Suite) • ProGuard / R8 • Code Obfuscation

UI/UX & Performance: Jetpack Compose • Material Design 3 • XML Layouts • Performance Profiling • Memory Optimisation • Background Services

Git & CI/CD: Git • GitHub (branching, pull requests, code review) • Jenkins • GitHub Actions • CI/CD Pipeline Integration

Testing: Katalon Studio • JUnit • Espresso • Mockito • UI Automator • Automated Regression Testing

Tools & Productivity: GitHub Copilot • Android Studio AI • Jira • Gradle • Firebase Suite

PROFESSIONAL EXPERIENCE

Senior Android Engineer

Tata Consultancy Services | Jun 2024 – Sep 2025

- Architected and delivered complex Android features in Kotlin and Java for an enterprise application serving 500K+ users; managed the full app lifecycle from feature scoping and design through build, testing, release, and post-launch monitoring.
- Integrated Firebase Cloud Messaging (FCM) with a targeted notification architecture, driving a 90% uplift in user engagement; leveraged Firebase Crashlytics and Analytics for real-time stability monitoring.
- Consumed and integrated RESTful APIs with robust error handling, authentication flows, and offline caching strategies using Room (local SQLite) — ensuring seamless data access in low-connectivity conditions.
- Applied mobile security best practices across the SDLC: OWASP Top 10 compliance, SAST (SonarQube), DAST (Burp Suite / OWASP ZAP), ProGuard/R8 obfuscation, and certificate pinning — improving overall application security stability by 100%.
- Managed source code using GitHub with structured branching strategies and pull request workflows; integrated automated security and quality gates into Jenkins and GitHub Actions CI/CD pipelines.
- Maintained 100% Android API compatibility across target SDK levels; performed performance profiling and background service optimisation to ensure smooth, responsive UX.
- Used GitHub Copilot and AI-assisted code review to accelerate delivery and reduce boilerplate, freeing bandwidth for architecture and security work.

Functional Privacy & Compliance Manager

Tata Consultancy Services | Apr 2023 – Jun 2025

- Enforced GDPR and India DPDP compliance requirements across mobile product lines, reviewing Android data collection mechanisms, API data flows, and offline storage to ensure sensitive user data was handled and secured correctly.
- Fed privacy impact findings (DPIA/PIA) into the mobile SDLC at design stage, influencing architecture decisions around data minimisation and secure storage in app features.

Android Developer

Tata Consultancy Services | Aug 2021 – May 2024

- Engineered a production-grade, secure Java-based Android authentication application adopted by 500K+ users — implementing AES-encrypted offline storage, certificate pinning (SSL/TLS), and session management aligned to OWASP MASVS.
- Integrated RESTful APIs with robust request/response handling, token-based authentication, and background service management using WorkManager for reliable async operations.
- Improved application responsiveness by 30% through targeted performance profiling, UI-thread offloading via Kotlin Coroutines, and advanced Gradle build configuration tuning.
- Built a comprehensive automated testing suite (Katalon Studio, Espresso, JUnit), reducing manual QA effort by 80% and integrating tests into CI/CD pipelines for every release.
- Refactored legacy Java modules to Kotlin with MVVM architecture and Jetpack components, improving maintainability and long-term scalability.

Web Development Intern

Obdurate Technologies | Jun 2019 – Jul 2019

- Built and deployed responsive web applications; performed DAST scanning to identify and mitigate XSS vulnerabilities (OWASP Top 10) prior to deployment.

ANDROID PROJECTS

Unit Converter App — Kotlin · Jetpack Compose · MVVM

- Designed and shipped a production-ready Android app applying MVVM architecture, Jetpack Compose for declarative UI, and offline-first state management — demonstrating mastery of modern Android UI patterns and reactive data flow.

Quiz App — Kotlin · Jetpack Components · Firebase

- Built a dynamic quiz application with real-time score tracking leveraging Jetpack ViewModel and LiveData for reactive UI state; integrated Firebase Analytics to track user engagement across sessions.

EDUCATION

B.E. Computer Science & Engineering — Sipna College of Engineering & Technology, Amravati | 2017 – 2021

CERTIFICATIONS

- Android Architecture Patterns
- OWASP Top 10
- Programming in C++
